

XCHROM helps young girls in underserved communities gain Confidence in STEM-related fields by creating Health and Research Opportunities through Mentorship.

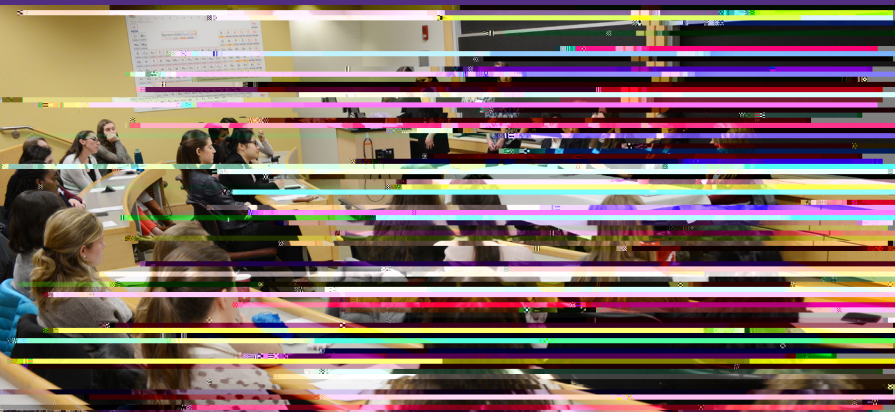

We are living out this mission in two primary ways: through the implementation of our unique Sisters in Science program and

**Women in Science (WinS) Day** celebrates the involvement of young female students in the sciences, empowering them to pursue an education in the sciences and a wide variety of possible professional pursuits. Undergraduate women of the College and high school-aged students from the Worcester area are invited to spend the day at our newly renovated and expanded Science Complex. Undergraduate attendees will benefit from alumnae panels, inspiring speakers, and a networking session. High school students will participate in interactive lab demonstrations and a STEM-specific browsing session.

Now in its second year, Women in Science Day at Holy Cross is well on its way to being an annual event that is eagerly anticipated by students and faculty alike.
